

LiquiMedLock™

One step click-lock closure and bottle

Securing LiquiMedLock™ closure

To ensure proper closure when securing the cap on the bottle, you should hear a click locking the ring band to the bottle. If you do not hear a click-lock, check visibly to ensure tamper evident band is showing secure and shake bottle to check for any leakage.

LiquiMedLock™ closures are tamper evident protected only on the first closing and should not be re-used to fill new prescriptions.

The C/R properties of the cap will allow the outer assembly to freely spin while maintaining seal –lock integrity.
